SCHOOL ENERGY MANAGEMENT
TOPIC OF UD WORKSHOP

DAYTON, Ohio, December 4, 1978 --- The management of an energy conservation program in public school systems will be the focus of a workshop Friday, December 8, sponsored by the University of Dayton Office of Educational Services. The workshop will start at 9 a.m. at the Imperial House North and will continue until 2:30 p.m. Admission is free for members of the Dayton Area Superintendent's Association; for others, there will be a \$20 charge which includes lunch.

Guest speakers Sharen Seversen and Gerald Buckles of the Exxon Corporation will speak in the morning about the management of energy conservation systems. Seversen--a mechanical engineer who joined Exxon in 1973--is Senior Technical Analyst for Exxon's marketing division. Buckles is Exxon's Senior Sales Representative from Industrial and Consumer Business.

In the afternoon, Dr. John Minardi, professor of mechanical engineering at UD, will discuss the future of solar energy use in schools.

Kenneth Crim, professor and education consultant in the Office of Educational Services, says the workshop "has a different thrust from others that have been offered in the past on just management in that it deals with the continuing management of an energy conservation program as well as with alternative energy sources."

Energy principles will be presented with the design of school systems in mind, but may also be applied to other types of situations.

The Office of Educational Services (OES) at UD has in the past consulted with the Dayton public school system on matters ranging from school financing to public participation in Board meetings. Results of a study just completed by OES on the cost of electrical energy used by Dayton public schools over the last 6 years will be made available at Friday's workshop.
